EDUCATION

MSc Information Technology

University of Kashmir
2023 – 2025

BSc Non-Medical

Govt. Degree College, Kashmir
2019 – 2022

SKILLS

- Python, SQL, C++
- PyTorch, TensorFlow, Scikit-Learn
- Vision Transformers (ViT), CNNs
- Grad-CAM, FAISS Similarity Search
- LLM APIs (Gemini), Prompt Engineering
- Flask, React, Docker, Git
- Pandas, NumPy, EDA

LANGUAGES

English — Professional
Urdu — Native
Kashmiri — Native

RESEARCH INTERESTS

Computer Vision · Explainable AI
Retrieval-Augmented Systems
Generative AI · Medical AI

ABOUT ME

AI/ML Engineer with an MSc in Information Technology and hands-on experience building computer vision pipelines, deep learning models, and intelligent retrieval systems. Specializes in Vision Transformers, Explainable AI (Grad-CAM), and FAISS-powered similarity search — delivering 92% Top-5 retrieval accuracy and sub-400ms query latency in production-style pipelines. Seeking an AI/ML Engineer or Computer Vision Engineer role to apply this expertise to real-world problems.

EXPERIENCE

Data Analyst Intern · 360DigiTMG Jun 2025 – Nov 2025

Emerging Technologies Consulting Firm · Remote / India

- Completed a structured internship project on Medical Inventory Optimization — applied data analysis and ML techniques to forecast demand and reduce stockouts across healthcare supply chains.
- Designed and implemented end-to-end data pipelines including data cleaning, EDA, feature engineering, and predictive modelling using Python, Pandas, and Scikit-Learn.
- Delivered actionable insights through structured reports and visualizations; project certified by 360DigiTMG (Code: 360-IN/23/Q3/07/05896).

AI / ML PROJECTS

VI-CBIR — Explainable Medical Image Retrieval [Flagship Project]

Stack: PyTorch · ViT · FAISS · Grad-CAM · Gradio | github.com/Dar-Ishfaq-1

- Built an explainable image retrieval engine using a pre-trained Vision Transformer, achieving 92% Top-5 retrieval accuracy.
- Integrated FAISS nearest-neighbor indexing for sub-400ms queries across a 10,000+ image index; added Grad-CAM overlays for full result auditability.

Content-Based Medical Image Retrieval (CBMIR)

Stack: PyTorch · ViT · FAISS · OpenCV · XAI | github.com/DarAshfaqDev/Content-Based-Medical-Image-Retrieval-CBMIR

- Extracted ViT embeddings from medical scans and ranked similar cases by cosine similarity, achieving 0.87 Mean Average Precision.
- Designed a FAISS indexing pipeline cutting retrieval time by orders of magnitude versus brute-force search.

Text-to-SQL Agent — NL to SQL using Gemini AI

Stack: Python · Flask · Gemini AI · React | github.com/DarAshfaqDev/Text-to-SQL-Agent

- Built a full-stack GenAI app converting natural language into validated SQL via Gemini's LLM API with schema-aware prompting.
- Shipped a Flask REST backend and React + Tailwind frontend with SQL-injection safeguards.

Weather Analytics & Forecasting Platform

Stack: Python · Scikit-Learn · Streamlit · Docker | github.com/DarAshfaqDev/Weather-Analytics-Forecasting-Platform

- Built an ML forecasting platform with real-time ingestion, anomaly detection, and an interactive Streamlit dashboard across 20+ cities.
- Containerized the stack with Docker and automated 15-minute data refresh cycles.

CERTIFICATIONS
